

IRSOIL&WATER 2026

Bergamo, June 16-19

Sixth Intercomparison for Radon Measurements in Soil and Water

Conference on Measurements, Geology, Remediation, and Regulatory Aspects

FIRST ANNOUNCEMENT

PROGRAM

June 16 WORKSHOP ERA - European Radon Association

June 17 Field Measurements

June 18-19 Technical-scientific conference

Conference language: English/Italian with translation

PRESENTATION

ASSORADON and AIRP are reviving an important event, now in its sixth edition, in the wake of the growing interest in the natural radioactivity: **IRSOIL&WATER 2026**.

The conference, held this year in the historic city of **Bergamo**, will host the **European Radon Association's (ERA) annual workshop** on the first day, for the first time in Italy, with presentations on topics of international relevance.

On June 17th, field measurement exercises will follow, with assessments of radon activity concentrations in **soil and water** matrices and, for the first time, **gamma spectrometry** also aimed at assessing radon risk.

The experience of this inter-comparison responds to the need of laboratories and many professionals to discuss these measurement techniques, assessment approaches particularly widespread among industry operators.

Finally, **the technical/scientific conference** will take place on June 18th and 19th. The aim is to address local specificities and, at the same time, consolidate the approach to the radon problem on a national scale.

ASSORADON and AIRP aim to increasingly expand the audience of participants, highlighting how multi-disciplinarity is an essential aspect when addressing the radon problem. In this regard, there will be a focus on epidemiological aspects.

MAIN TOPICS

WORKSHOP ERA

- State-of-the-art radon measurement techniques in air, water, and soil

IRSOIL

- Regulatory aspects, with the support of national and regional public bodies
- Remedial actions carried out in the area and practical cases
- Geological aspects
- Epidemiological aspects

The Organizing Committee
